

## JET-UK

Contractor: United Kingdom Atomic Energy Agency, United Kingdom

In the JET (Joint European Torus) project for nuclear fusion research in UK, VR4Robots® is successfully operational for planning, validating and the execution of maintenance tasks in the hazardous environments of this fusion reactor.

VR4Robots® offers robot- and remote handling application engineers a PC based real time visualization, simulation and control capability. See the VR4Robots® website [www.vr4robots.com](http://www.vr4robots.com) of this website for more details.
