

Oxford Technologies Ltd., UK

Oxford Technologies (OTL) and Tree C are cooperating for several years now in the area of remote handling. Together we offer high quality products and services for remote handling and robotic applications. The cooperation also gave birth to the VR4Robots application, combining OTL's expertise in RH and Tree C's visualization and simulation technology VR4MAX.

OTL's staff have extensive experience in the real world implementation and operation of complete solutions for complex Remote Handling problems, Remote Manipulators and Tooling, Advanced Control Systems and Man-Machine Interfaces for Robotic devices and Virtual Reality systems for mock-up or operations analysis. Their capabilities cover the entire breadth of remote handling from concept definition to operation and final decommissioning.
