

Company

"Imagination is more important than knowledge" - Albert Einstein

Tree C is an independent, privately held company, established in 1994 and is headquartered in Ede in The Netherlands. Coming from a background in 3D CAD, PDM, knowledge based engineering and visualization software, we now develop our own real time 3D graphics software and productivity tools. The VR4MAX product family is deployed in a wide range of visualization and simulation industries, including the entertainment industry. Our drive is to provide affordable, yet highest quality visualization tools that fit in a streamlined production process and thus add value to the creativity, professionalism and business of our customers. We have customers on all continents.

External Databases

Tree C develops special graphics software and virtual reality based on the VR4MAX ® technology. From real-time 3D visualisation of external databases to providing real-time 3D graphics viewports for for instance ROV simulations etc. As an innovative company Tree C is closely looking at all sorts of technological developments for possible application and integration in the 3D graphics world. We are therefore the right partners for realisation of your non-standard ideas and requests.

Real Time Simulation / Remote handling

Since Tree C is owner of its technology, we can be very responsive to non-standard questions. We have toolkits for software integrators but we are also actively participating in projects that require special implementations of graphics technology. They vary from robot simulation to real time Remote Operated Vehicle control. Please contact us to discuss your specific requirements.
